Appl. No.:   09/905,355
Amdt. Dated: 10/04/2005
Off. Act. Dated: 08/19/2005

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (previously presented): A system for identifying a time specific event, comprising:

a data marker device configured to store one or more time stamps and a device identification code;

a server terminal configured to generate a reference time information;

a user terminal configured to receive the one or more time stamps and the device identification code from the data marker device, and to receive the reference time information from the server terminal, the user terminal further configured to determine a time information corresponding to each of the one or more time stamps;

wherein the user terminal is configured to transmit the number of time stamps, the device identification code and the time information corresponding to each of the one or more time stamps to the server terminal;

wherein the user terminal is configured to receive a receipt acknowledgement signal from the server terminal upon termination of transmission; and

wherein the user terminal is configured to erase the time stamps stored in the data marker device after receiving the receipt acknowledgement signal.

2. (original): The system of claim 1 wherein each of the one or more time stamps stored in the data marker device is generated responsive to a user input operation of the data marker device.

Appl. No.:   09/905,355
Amdt. Dated: 10/04/2005
Off. Act. Dated: 08/19/2005

3. (previously presented): The system of claim 1:

wherein the data marker device includes a clock; and

wherein each of the one or more time stamps corresponds to a respective signal from the clock.

4. (original): The system of claim 3 wherein the clock is configured to increment in a one-second interval.

5. (previously presented): The system of claim 1 wherein the device identification code includes one of a predetermined length numeric sequence, a predetermined length letter sequence, or a predetermined length combination numeric and letter sequence.

6. (previously presented): The system of claim 1 wherein the data marker device stores time stamps based on an arbitrary running clock.

7. (previously presented): The system of claim 1 wherein the reference time information provides real time information corresponding substantially to the initial connection between the data marker device and the user terminal.

8. (original): The system of claim 1 wherein the user terminal is configured to transmit a request signal to the server terminal when the data marker device establishes connection to the user terminal.

9. (previously presented): The system of claim 8 wherein the server terminal is configured to generate and transmit the reference time information to the user terminal in response to the real time information request signal received from the user terminal.

Appl. No.:   09/905,355
Amdt. Dated: 10/04/2005
Off. Act. Dated: 08/19/2005

10. (original): The system of claim 8 wherein the connection between the data marker device and the user terminal includes one of a USB connection, a parallel connection, a serial connection, an IrDA connection and a Bluetooth connection.

11. (original): The system of claim 1 wherein the time information determined by the user terminal corresponding to the each one or more time stamps is based on the reference time information.

Claims 12-14 (canceled)

15. (original): The system of claim 14 wherein the user terminal is further configured to power off the data marker device.

16. (original): The system of claim 1 wherein the user terminal includes one of a personal computer, an Internet access enabled personal digital assistant, a Wireless Application Protocol enabled mobile telephone, and an i-mode enabled mobile telephone.

17. (original): The system of claim 1 further including a data network, the server terminal and the user terminal coupled to the data network.

18. (original): The system of claim 17 wherein the data network includes one of a Local Area Network (LAN), a Wide Area Network (WAN), and an Internet connection.

19. (original): The system of claim 17 wherein the server terminal and the user terminal are coupled to the data network using one of a TCP/IP protocol and a wireless application protocol.

Appl. No.:   09/905,355
Amdt. Dated: 10/04/2005
Off. Act. Dated: 08/19/2005

20. (previously presented): The system of claim 1:

wherein the user terminal includes an output unit; and

wherein the user terminal is further configured to launch an Internet browser for display in the output unit.

Claims 21-51 (canceled)
